## G CSF (CSF3) (NM\_172220) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** G CSF (CSF3) (NM\_172220) Human Tagged ORF Clone Lentiviral Particle

Symbol: G CSF

Synonyms: C17orf33; CSF3OS; GCSF

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM\_172220

ORF Size: 600 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC207709).

Sequence:

Cytogenetics:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 172220.1, NP 757374.1

17q21.1

 RefSeq Size:
 1494 bp

 RefSeq ORF:
 516 bp

 Locus ID:
 1440

 UniProt ID:
 P09919

**Protein Families:** Druggable Genome, ES Cell Differentiation/IPS, Secreted Protein

## G CSF (CSF3) (NM\_172220) Human Tagged ORF Clone Lentiviral Particle - RC207709L2V

**Protein Pathways:** Cytokine-cytokine receptor interaction, Hematopoietic cell lineage, Jak-STAT signaling

pathway

**MW:** 21.5 kDa

**Gene Summary:** This gene encodes a member of the IL-6 superfamily of cytokines. The encoded cytokine

controls the production, differentiation, and function of granulocytes. Granulocytes are a type of white blood cell that are part of the innate immune response. A modified form of this protein is commonly administered to manage chemotherapy-induced neutropenia.

Alternatively spliced transcript variants have been described for this gene. [provided by

RefSeq, May 2020]
