Interferon regulatory factor 9 (IRF9) (NM_006084) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Interferon regulatory factor 9 (IRF9) (NM_006084) Human Tagged ORF Clone Lentiviral Particle

Symbol: Interferon regulatory factor 9

None

Synonyms: IRF-9; ISGF3; ISGF3G; p48

Mammalian Cell

Selection:

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_006084

ORF Size: 1179 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC207768).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 006084.4</u>

 RefSeq Size:
 1699 bp

 RefSeq ORF:
 1182 bp

 Locus ID:
 10379

 UniProt ID:
 Q00978

 Cytogenetics:
 14q12

 Domains:
 IRF

Interferon regulatory factor 9 (IRF9) (NM_006084) Human Tagged ORF Clone Lentiviral Particle – RC207768L2V

Protein Families: Druggable Genome, Transcription Factors

Protein Pathways: Jak-STAT signaling pathway

MW: 43.7 kDa

Gene Summary: This gene encodes a member of the interferon regulatory factor (IRF) family, a group of

transcription factors with diverse roles, including virus-mediated activation of interferon, and modulation of cell growth, differentiation, apoptosis, and immune system activity. Members of the IRF family are characterized by a conserved N-terminal DNA-binding domain containing tryptophan (W) repeats. Mutations in this gene result in Immunodeficiency 65. [provided by

RefSeq, Jul 2020]
