LILRB2 (NM_005874) Human Tagged ORF Clone Lentiviral Particle – RC207770L3V

Gene Summary:This gene is a member of the leukocyte immunoglobulin-like receptor (LIR) family, which is
found in a gene cluster at chromosomal region 19q13.4. The encoded protein belongs to the
subfamily B class of LIR receptors which contain two or four extracellular immunoglobulin
domains, a transmembrane domain, and two to four cytoplasmic immunoreceptor tyrosine-
based inhibitory motifs (ITIMs). The receptor is expressed on immune cells where it binds to
MHC class I molecules on antigen-presenting cells and transduces a negative signal that
inhibits stimulation of an immune response. It is thought to control inflammatory responses
and cytotoxicity to help focus the immune response and limit autoreactivity. Multiple
transcript variants encoding different isoforms have been found for this gene. [provided by
