## TBX21 (NM\_013351) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** TBX21 (NM\_013351) Human Tagged ORF Clone Lentiviral Particle

Symbol: TBX21

**Synonyms:** T-bet; T-PET; TBET; TBLYM

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_013351 **ORF Size:** 1605 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC207902).

•

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 013351.1

 RefSeq Size:
 2589 bp

 RefSeq ORF:
 1608 bp

 Locus ID:
 30009

 UniProt ID:
 Q9UL17

 Cytogenetics:
 17q21.32

 Domains:
 T-box

**Protein Families:** Druggable Genome, Transcription Factors

ORÏGENE

**MW:** 58.1 kDa

**Gene Summary:** This gene is a member of a phylogenetically conserved family of genes that share a common

DNA-binding domain, the T-box. T-box genes encode transcription factors involved in the regulation of developmental processes. This gene is the human ortholog of mouse Tbx21/Tbet gene. Studies in mouse show that Tbx21 protein is a Th1 cell-specific

transcription factor that controls the expression of the hallmark Th1 cytokine, interferongamma (IFNG). Expression of the human ortholog also correlates with IFNG expression in Th1 and natural killer cells, suggesting a role for this gene in initiating Th1 lineage development

from naive Th precursor cells. [provided by RefSeq, Jul 2008]
