	AIBZIP (CREB3L4) (NM_130898) Human Tagged ORF Clone Lentiviral Particle – RC207937L1V
Protein Pathways:	Huntington's disease, Melanogenesis, Prostate cancer
MW:	43.4 kDa
Gene Summary:	This gene encodes a CREB (cAMP responsive element binding) protein with a transmembrane domain which localizes it to the ER membrane. The encoded protein is a transcriptional activator which contains a dimerization domain, and this protein may function in a number of processing pathways including protein processing. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2011]
