

Product datasheet for RC208058L1

FECH (NM_000140) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FECH (NM 000140) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: FECH

Synonyms: EPP; EPP1; FCE

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC208058).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000140

ORF Size: 1269 bp

FECH (NM_000140) Human Tagged Lenti ORF Clone - RC208058L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000140.2</u>

 RefSeq Size:
 7277 bp

 RefSeq ORF:
 1272 bp

 Locus ID:
 2235

 UniProt ID:
 P22830

Cytogenetics: 18q21.31

Domains: Ferrochelatase

Protein Families: Druggable Genome

Protein Pathways: Metabolic pathways, Porphyrin and chlorophyll metabolism

MW: 47.9 kDa

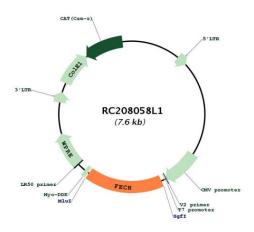

Gene Summary: The protein encoded by this gene is localized to the mitochondrion, where it catalyzes the

insertion of the ferrous form of iron into protoporphyrin IX in the heme synthesis pathway. Mutations in this gene are associated with erythropoietic protoporphyria. Two transcript variants encoding different isoforms have been found for this gene. A pseudogene of this

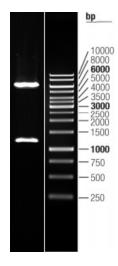

gene is found on chromosome 3.[provided by RefSeq, May 2010]
