	GIMAP1 (NM_130759) Human Tagged ORF Clone Lentiviral Particle – RC208167L4V
MW:	34.4 kDa
Gene Summary:	This gene encodes a protein belonging to the GTP-binding superfamily and to the immuno- associated nucleotide (IAN) subfamily of nucleotide-binding proteins. In humans, the IAN subfamily genes are located in a cluster at 7q36.1. This gene is thought to be involved in the differentiation of T helper (Th) cells of the Th1 lineage, and the related mouse gene has been shown to be critical for the development of mature B and T lymphocytes. Read-through transcription exists between this gene and the downstream GIMAP5 (GTPase, IMAP family member 5) gene. [provided by RefSeq, Dec 2010]
