ZFP91 (NM_053023) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ZFP91 (NM_053023) Human Tagged ORF Clone Lentiviral Particle

Symbol: ZFP91

Synonyms: DMS-8; DSM-8; DSM8; FKSG11; PZF; ZFP-91; ZNF757

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 053023

ORF Size: 1707 bp

ORF Nucleotide

TI. ODE

Sequence:
OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC208217).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 053023.2

 RefSeq Size:
 5735 bp

 RefSeq ORF:
 1713 bp

 Locus ID:
 80829

 UniProt ID:
 Q96|P5

Cytogenetics: 11q12.1

Domains: zf-C2H2

Protein Families: Transcription Factors

ORÏGENE

MW: 63.4 kDa

Gene Summary:

The protein encoded by this gene is a member of the zinc finger family of proteins. The gene product contains C2H2-type domains, which are the classical zinc finger domains found in numerous nucleic acid-binding proteins. This protein functions as a regulator of the non-canonical NF-kappaB pathway in lymphotoxin-beta receptor signaling. Alternative splicing results in multiple transcript variants. A read-through transcript variant composed of ZFP91 and the downstream CNTF gene sequence has been identified, but it is thought to be non-coding. Read-through transcription of ZFP91 and CNTF has also been observed in mouse. A ZFP91-related pseudogene has also been identified on chromosome 2. [provided by RefSeq, Oct 2010]
