GFM1 (NM_024996) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GFM1 (NM 024996) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: GFM1

Synonyms: COXPD1; EFG; EFG1; EFGM; EGF1; GFM; hEFG1; mtEF-G1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

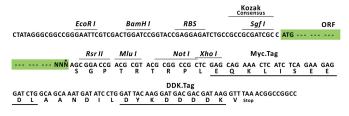

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC208239).

Sequence:

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_024996

ORF Size: 2253 bp

GFM1 (NM_024996) Human Tagged Lenti ORF Clone - RC208239L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 024996.5</u>

 RefSeq Size:
 3468 bp

 RefSeq ORF:
 2256 bp

 Locus ID:
 85476

 UniProt ID:
 Q96RP9

 Cytogenetics:
 3q25.32

Domains: EFG_C, GTP_EFTU, GTP_EFTU_D2, EFG_IV

MW: 83.5 kDa

Gene Summary: Eukaryotes contain two protein translational systems, one in the cytoplasm and one in the

mitochondria. Mitochondrial translation is crucial for maintaining mitochondrial function and

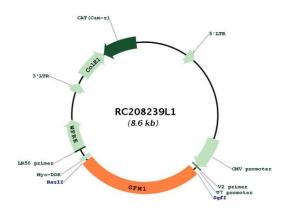

mutations in this system lead to a breakdown in the respiratory chain-oxidative

phosphorylation system and to impaired maintenance of mitochondrial DNA. This gene encodes one of the mitochondrial translation elongation factors. Its role in the regulation of normal mitochondrial function and in different disease states attributed to mitochondrial

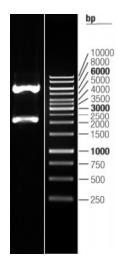

dysfunction is not known. [provided by RefSeq, Jul 2008]
