## Calprotectin (S100A9) (NM 002965) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Calprotectin (S100A9) (NM\_002965) Human Tagged ORF Clone Lentiviral Particle

Symbol: S100A9

Synonyms: 60B8AG; CAGB; CFAG; CGLB; L1AG; LIAG; MAC387; MIF; MRP14; NIF; P14

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

NM 002965

Tag: Myc-DDK

ORF Size: 342 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC208250).

Sequence:

ACCN:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 002965.2

 RefSeq Size:
 586 bp

 RefSeq ORF:
 345 bp

 Locus ID:
 6280

 UniProt ID:
 P06702

 Cytogenetics:
 1q21.3

 Domains:
 S 100, EFh

MW: 5\_100, EF

## **Gene Summary:**

The protein encoded by this gene is a member of the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein may function in the inhibition of casein kinase and altered expression of this protein is associated with the disease cystic fibrosis. This antimicrobial protein exhibits antifungal and antibacterial activity. [provided by RefSeq, Nov 2014]
