Cathepsin O (CTSO) (NM_001334) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cathepsin O (CTSO) (NM_001334) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Cathepsin O

Synonyms: CTSO1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

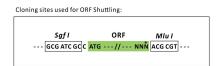

E. coli Selection: Chloramphenicol (34 ug/mL)

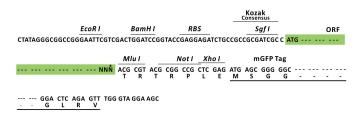

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC208268).

Sequence:

Sgfl-Mlul

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001334

ORF Size: 963 bp

Cathepsin O (CTSO) (NM_001334) Human Tagged Lenti ORF Clone - RC208268L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001334.2</u>

RefSeq Size: 2943 bp
RefSeq ORF: 966 bp
Locus ID: 1519

 UniProt ID:
 P43234

 Cytogenetics:
 4q32.1

Domains: Pept C1

Protein Families: Druggable Genome, Protease

Protein Pathways: Lysosome MW: 36 kDa

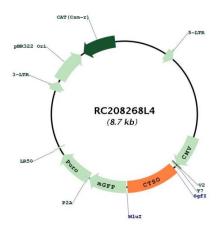

Gene Summary: The protein encoded by the gene is a cysteine proteinase and a member of the papain

superfamily. This proteolytic enzyme is involved in cellular protein degradation and turnover. The recombinant form of this enzyme was shown to degrade synthetic peptides typically used as substrates for cysteine proteinases and its proteolytic activity was abolished by an inhibitor

of cyteine proteinase. [provided by RefSeq, Jul 2008]
