Renin (REN) (NM_000537) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Renin (REN) (NM_000537) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: Renin

Synonyms: ADTKD4; HNFJ2; RTD

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC208382).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_000537

ORF Size: 1218 bp

Renin (REN) (NM_000537) Human Tagged Lenti ORF Clone - RC208382L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000537.2</u>

 RefSeq Size:
 1493 bp

 RefSeq ORF:
 1221 bp

 Locus ID:
 5972

 UniProt ID:
 P00797

Cytogenetics: 1q32.1

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: Renin-angiotensin system

MW: 45.1 kDa

Gene Summary: This gene encodes renin, an aspartic protease that is secreted by the kidneys. Renin is a part

of the renin-angiotensin-aldosterone system involved in regulation of blood pressure, and

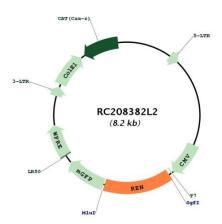

electrolyte balance. This enzyme catalyzes the first step in the activation pathway of

angiotensinogen by cleaving angiotensinogen to form angiotensin I, which is then converted to angiotensin II by angiotensin I converting enzyme. This cascade can result in aldosterone release, narrowing of blood vessels, and increase in blood pressure as angiotension II is a vasoconstrictive peptide. Transcript variants that encode different protein isoforms and that arise from alternative splicing and the use of alternative promoters have been described, but their full-length nature has not been determined. Mutations in this gene have been shown to cause hyperuricemic nephropathy familial juvenile 2, familial hyperproreninemia, and renal

tubular dysgenesis. [provided by RefSeq, May 2020]
