	GABA B Receptor 1 (GABBR1) (NM_021903) Human Tagged ORF Clone Lentiviral Particle – RC208503L3V
Protein Pathwa	<b>rs:</b> Neuroactive ligand-receptor interaction
MW:	92.2 kDa
Gene Summary:	This gene encodes a receptor for gamma-aminobutyric acid (GABA), which is the main inhibitory neurotransmitter in the mammalian central nervous system. This receptor functions as a heterodimer with GABA(B) receptor 2. Defects in this gene may underlie brain disorders such as schizophrenia and epilepsy. Alternative splicing generates multiple transcript variants, but the full-length nature of some of these variants has not been determined. [provided by RefSeq, Jan 2016]
