

# Product datasheet for RC208506L4

# Factor X (F10) (NM\_000504) Human Tagged Lenti ORF Clone

## **Product data:**

Product Type:	Expression Plasmids
Product Name:	Factor X (F10) (NM_000504) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	Factor X
Synonyms:	FX; FXA
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC208506).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I           GCG ATC GCC         ATG // NNN         ACG CGT

ACCN: ORF Size: NM\_000504 1464 bp

	actor X (F10) (NM_000504) Human Tagged Lenti ORF Clone – RC208506L4
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Met	<ul> <li>hod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 000504.3</u>
RefSeq Size:	1560 bp
RefSeq ORF:	1467 bp
Locus ID:	2159
UniProt ID:	<u>P00742</u>
Cytogenetics:	13q34
Domains:	GLA, Tryp_SPc, EGF_CA, EGF, EGF
Protein Families:	Druggable Genome, Protease, Transmembrane
Protein Pathways:	Complement and coagulation cascades
MW:	54.7 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Sactor X (F10) (NM\_000504) Human Tagged Lenti ORF Clone – RC208506L4

Gene Summary:This gene encodes the vitamin K-dependent coagulation factor X of the blood coagulation<br/>cascade. This factor undergoes multiple processing steps before its preproprotein is<br/>converted to a mature two-chain form by the excision of the tripeptide RKR. Two chains of<br/>the factor are held together by 1 or more disulfide bonds; the light chain contains 2 EGF-like<br/>domains, while the heavy chain contains the catalytic domain which is structurally<br/>homologous to those of the other hemostatic serine proteases. The mature factor is activated<br/>by the cleavage of the activation peptide by factor IXa (in the intrisic pathway), or by factor<br/>VIIa (in the extrinsic pathway). The activated factor then converts prothrombin to thrombin in<br/>the presence of factor Va, Ca+2, and phospholipid during blood clotting. Mutations of this<br/>gene result in factor X deficiency, a hemorrhagic condition of variable severity. Alternative<br/>splicing results in multiple transcript variants encoding different isoforms that may undergo<br/>similar proteolytic processing to generate mature polypeptides. [provided by RefSeq, Aug<br/>2015]
