

Product datasheet for **RC208530L3V**

PARG (NM_003631) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	PARG (NM_003631) Human Tagged ORF Clone Lentiviral Particle
Symbol:	PARG
Synonyms:	PARG99
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_003631
ORF Size:	2928 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC208530).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	NM_003631.2
RefSeq Size:	4276 bp
RefSeq ORF:	2931 bp
Locus ID:	8505
UniProt ID:	Q86W56
Cytogenetics:	10q11.23
Domains:	PARG
MW:	111.1 kDa

Gene Summary:

Poly(ADP-ribose) glycohydrolase (PARG) is the major enzyme responsible for the catabolism of poly(ADP-ribose), a reversible covalent-modifier of chromosomal proteins. The protein is found in many tissues and may be subject to proteolysis generating smaller, active products. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2015]
