Heparanase 1 (HPSE) (NM_006665) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Heparanase 1 (HPSE) (NM_006665) Human Tagged ORF Clone Lentiviral Particle

Symbol: Heparanase 1

Synonyms: HPA; HPA1; HPR1; HPSE1; HSE1

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_006665 **ORF Size:** 1629 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC208556).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 006665.3, NP 006656.1

 RefSeq Size:
 4668 bp

 RefSeq ORF:
 1632 bp

 Locus ID:
 10855

 UniProt ID:
 Q9Y251

 Cytogenetics:
 4q21.23

Domains: Glyco_hydro_79n **Protein Families:** Secreted Protein

Heparanase 1 (HPSE) (NM_006665) Human Tagged ORF Clone Lentiviral Particle - RC208556L4V

Protein Pathways: Glycosaminoglycan degradation, Metabolic pathways

MW: 61.2 kDa

Gene Summary: Heparan sulfate proteoglycans are major components of the basement membrane and

extracellular matrix. The protein encoded by this gene is an enzyme that cleaves heparan sulfate proteoglycans to permit cell movement through remodeling of the extracellular matrix. In addition, this cleavage can release bioactive molecules from the extracellular matrix. Several transcript variants encoding different isoforms have been found for this gene.

[provided by RefSeq, Sep 2011]
