## Serum Response Factor (SRF) (NM\_003131) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Serum Response Factor (SRF) (NM\_003131) Human Tagged ORF Clone Lentiviral Particle

Symbol: Serum Response Factor

Synonyms: MCM1

Mammalian Cell None

Selection:

Vector:

pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 003131

ORF Size: 1524 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC208596).

Sequence:

**UniProt ID:** 

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 003131.2

 RefSeq Size:
 4343 bp

 RefSeq ORF:
 1527 bp

 Locus ID:
 6722

Cytogenetics: 6p21.1

**Domains:** MADS

**Protein Families:** Druggable Genome, Transcription Factors

P11831

## Serum Response Factor (SRF) (NM\_003131) Human Tagged ORF Clone Lentiviral Particle – RC208596L1V

**Protein Pathways:** MAPK signaling pathway

**MW:** 51.4 kDa

**Gene Summary:** This gene encodes a ubiquitous nuclear protein that stimulates both cell proliferation and

differentiation. It is a member of the MADS (MCM1, Agamous, Deficiens, and SRF) box superfamily of transcription factors. This protein binds to the serum response element (SRE)

in the promoter region of target genes. This protein regulates the activity of many

immediate-early genes, for example c-fos, and thereby participates in cell cycle regulation, apoptosis, cell growth, and cell differentiation. This gene is the downstream target of many pathways; for example, the mitogen-activated protein kinase pathway (MAPK) that acts through the ternary complex factors (TCFs). Two transcript variants encoding different

isoforms have been found for this gene. [provided by RefSeq, May 2014]
