|------------------|--|
| Protein Pathways | Pathways in cancer, Renal cell carcinoma |
| MW: | 96.5 kDa |
| Gene Summary: | This gene encodes a transcription factor involved in the induction of genes regulated by oxygen, which is induced as oxygen levels fall. The encoded protein contains a basic-helix- loop-helix domain protein dimerization domain as well as a domain found in proteins in signal transduction pathways which respond to oxygen levels. Mutations in this gene are associated with erythrocytosis familial type 4. [provided by RefSeq, Nov 2009] |
