However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

Gene Summary:When cross-linked to form dimers and trimers, it has a regulatory effect on ERK signaling<br/>pathway activity in response to EGF stimulation. Colocalizes with the EGF receptor in WDR54-<br/>specific vesicle where it sustains the internalization and controls the degradation of the EGF<br/>receptor after EGF stimulation.[UniProtKB/Swiss-Prot Function]
