## NFATC4 (NM\_004554) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** NFATC4 (NM\_004554) Human Tagged ORF Clone Lentiviral Particle

Symbol: NFATC4

Synonyms: NF-AT3; NF-ATC4; NFAT3

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag:Myc-DDKACCN:NM\_004554

ORF Size: 2706 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC208770).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 004554.3

 RefSeq Size:
 4944 bp

 RefSeq ORF:
 2709 bp

 Locus ID:
 4776

 UniProt ID:
 Q14934

Cytogenetics: 14q12

Domains: IPT

**Protein Families:** Druggable Genome, Transcription Factors

## NFATC4 (NM\_004554) Human Tagged ORF Clone Lentiviral Particle - RC208770L3V

**Protein Pathways:** Axon guidance, B cell receptor signaling pathway, MAPK signaling pathway, Natural killer cell

mediated cytotoxicity, T cell receptor signaling pathway, VEGF signaling pathway, Wnt

signaling pathway

**MW:** 95.3 kDa

**Gene Summary:** This gene encodes a member of the nuclear factor of activated T cells (NFAT) protein family.

The encoded protein is part of a DNA-binding transcription complex. This complex consists of at least two components: a preexisting cytosolic component that translocates to the nucleus upon T cell receptor stimulation and an inducible nuclear component. NFAT proteins are activated by the calmodulin-dependent phosphatase, calcineurin. The encoded protein plays a role in the inducible expression of cytokine genes in T cells, especially in the induction of interleukin-2 and interleukin-4. Alternative splicing results in multiple transcript variants.
