GRIGENE FBXL4 (NM_012160) Human Tagged Lenti ORF Clone – RC208817L1	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	 Dd: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 012160.3</u>

Section 2012 CRIGENE FBXL4 (NM_012160) Human Tagged Lenti ORF Clone – RC208817L1

Gene Summary:This gene encodes a member of the F-box protein family, which are characterized by an
approximately 40 amino acid motif, the F-box. F-box proteins constitute one subunit of
modular E3 ubiquitin ligase complexes, called SCF complexes, which function in
phosphorylation-dependent ubiquitination. The F-box domain mediates protein-protein
interactions and binds directly to S-phase kinase-associated protein 1. In addition to an F-box
domain, the encoded protein contains at least 9 tandem leucine-rich repeats. The ubiquitin
ligase complex containing the encoded protein may function in cell-cycle control by regulating
levels of lysine-specific demethylase 4A. Alternative splicing results in multiple transcript
variants. [provided by RefSeq, Jul 2013]
