TORC2 (CRTC2) (NM_181715) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TORC2 (CRTC2) (NM_181715) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: TORC2

Synonyms: TORC-2; TORC2

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

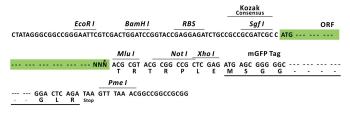

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC208836).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_181715

ORF Size: 2079 bp

TORC2 (CRTC2) (NM_181715) Human Tagged Lenti ORF Clone - RC208836L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 181715.1, NP 859066.1

73.1 kDa

 RefSeq Size:
 2598 bp

 RefSeq ORF:
 2082 bp

 Locus ID:
 200186

 UniProt ID:
 Q53ET0

 Cytogenetics:
 1q21.3

MW:

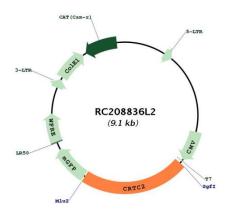

Gene Summary: This gene encodes a member of the transducers of regulated cAMP response element-

binding protein activity family of transcription coactivators. These proteins promote the transcription of genes targeted by the cAMP response element-binding protein, and therefore play an important role in many cellular processes. Under basal conditions the encoded protein is phosphorylated by AMP-activated protein kinase or the salt-inducible kinases and is sequestered in the cytoplasm. Upon activation by elevated cAMP or calcium, the encoded protein translocates to the nucleus and increases target gene expression. Single nucleotide polymorphisms in this gene may increase the risk of type 2 diabetes. A pseudogene of this

gene is located on the long arm of chromosome 5. [provided by RefSeq, Dec 2010]
