

Product datasheet for RC208868

VCY (VCY1B) (NM 181880) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: VCY (VCY1B) (NM_181880) Human Tagged ORF Clone

Tag: Myc-DDK
Symbol: VCY1B
Synonyms: BPY1B

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Cell Selection: Neomycin

ORF Nucleotide >RC208868 ORF sequence

Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

Plasmid Map:

ACCN: NM_181880

ORF Size: 375 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

VCY (VCY1B) (NM_181880) Human Tagged ORF Clone - RC208868

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 181880.2</u>

 RefSeq Size:
 573 bp

 RefSeq ORF:
 378 bp

 Locus ID:
 353513

 UniProt ID:
 014598

 Cytogenetics:
 Yq11.221

 MW:
 12.9 kDa

Gene Summary: The protein encoded by this gene is a member of a family of human VCX/Y genes. This gene

family has multiple members on both X and Y chromosomes, and all are expressed

region; this record represents the more telomeric copy. [provided by RefSeq, Jul 2008]

exclusively in male germ cells. Members of the VCX/Y family share a high degree of sequence identity, with the exception that a 30-bp unit is tandemly repeated in X-linked members but occurs only once in Y-linked members. VCX/Y genes encode small and highly charged proteins of unknown function. This gene encodes a small, positively charged protein. The presence of a putative bipartite nuclear localization signal suggests that this gene encodes a nuclear protein. The genome has two identical copies of this gene within a palindromic
