## VCY (VCY1B) (NM\_181880) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** VCY (VCY1B) (NM\_181880) Human Tagged ORF Clone Lentiviral Particle

Symbol: VCY

Synonyms: BPY1B

Mammalian Cell

Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM\_181880

ORF Size: 375 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC208868).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 181880.1</u>

 RefSeq Size:
 573 bp

 RefSeq ORF:
 378 bp

 Locus ID:
 353513

 UniProt ID:
 014598

 Cytogenetics:
 Yq11.221

 MW:
 12.9 kDa

## **Gene Summary:**

The protein encoded by this gene is a member of a family of human VCX/Y genes. This gene family has multiple members on both X and Y chromosomes, and all are expressed exclusively in male germ cells. Members of the VCX/Y family share a high degree of sequence identity, with the exception that a 30-bp unit is tandemly repeated in X-linked members but occurs only once in Y-linked members. VCX/Y genes encode small and highly charged proteins of unknown function. This gene encodes a small, positively charged protein. The presence of a putative bipartite nuclear localization signal suggests that this gene encodes a nuclear protein. The genome has two identical copies of this gene within a palindromic region; this record represents the more telomeric copy. [provided by RefSeq, Jul 2008]
