KRTCAP2 (NM_173852) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: KRTCAP2 (NM_173852) Human Tagged ORF Clone Lentiviral Particle

Symbol: KRTCAP2

Synonyms: KCP2

Mammalian Cell None

Selection:

Vector:

ACCN:

pLenti-C-Myc-DDK (PS100064)

NM 173852

Tag: Myc-DDK

ORF Size: 486 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC208887).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 173852.3, NP 776251.1</u>

RefSeq Size:577 bpRefSeq ORF:411 bpLocus ID:200185UniProt ID:Q8N6L1

Cytogenetics: 1q22

Protein Families: Transmembrane

MW: 17.4 kDa

Gene Summary:

Subunit of the oligosaccharyl transferase (OST) complex that catalyzes the initial transfer of a defined glycan (Glc(3)Man(9)GlcNAc(2) in eukaryotes) from the lipid carrier dolichol-pyrophosphate to an asparagine residue within an Asn-X-Ser/Thr consensus motif in nascent polypeptide chains, the first step in protein N-glycosylation. N-glycosylation occurs cotranslationally and the complex associates with the Sec61 complex at the channel-forming translocon complex that mediates protein translocation across the endoplasmic reticulum (ER). All subunits are required for a maximal enzyme activity (PubMed:22467853). May be involved in N-glycosylation of APP (amyloid-beta precursor protein). Can modulate gamma-secretase cleavage of APP by enhancing endoprotelysis of PSEN1 (PubMed:21768116). [UniProtKB/Swiss-Prot Function]
