OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amoun of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amount of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ throug naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water)
Reconstitution M	 hod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liqu at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date o shipping when stored at -20°C.

CRIGENE TCF7L1 (NM_031283) Human Tagged Lenti ORF Clone – RC208913L4

Gene Summary:This gene encodes a member of the T cell factor/lymphoid enhancer factor family of
transcription factors. These transcription factors are activated by beta catenin, mediate the
Wnt signaling pathway and are antagonized by the transforming growth factor beta signaling
pathway. The encoded protein contains a high mobility group-box DNA binding domain and
participates in the regulation of cell cycle genes and cellular senescence. [provided by RefSeq,
