Gene Summary:This gene encodes a highly conserved protein that plays an essential role in ribosome
biogenesis. The encoded protein interacts with elongation factor-like GTPase 1 to
disassociate eukaryotic initiation factor 6 from the late cytoplasmic pre-60S ribosomal subunit
allowing assembly of the 80S subunit. Mutations within this gene are associated with the
autosomal recessive disorder Shwachman-Bodian-Diamond syndrome. This gene has a
closely linked pseudogene that is distally located. [provided by RefSeq, Jan 2017]
