	Phospholipase D1 (PLD1) (NM_002662) Human Tagged ORF Clone Lentiviral Particle – RC209070L3V	
MW:	124.2 kDa	
Gene Summary:	This gene encodes a phosphatidylcholine-specific phospholipase which catalyzes the hydrolysis of phosphatidylcholine in order to yield phosphatidic acid and choline. The enzyme may play a role in signal transduction and subcellular trafficking. Alternative splicing results in multiple transcript variants with both catalytic and regulatory properties.
