## TEX19 (NM\_207459) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

**Product Name:** TEX19 (NM\_207459) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: TEX19

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this cl

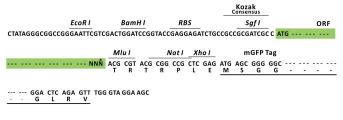

Sequence:

The ORF insert of this clone is exactly the same as(RC209297).

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

\* The last codon before the Stop codon of the ORF.

**ACCN:** NM 207459

ORF Size: 492 bp

#### TEX19 (NM\_207459) Human Tagged Lenti ORF Clone - RC209297L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 207459.1</u>

RefSeq Size: 1907 bp
RefSeq ORF: 495 bp
Locus ID: 400629
UniProt ID: Q8NA77
Cytogenetics: 17q25.3

**MW:** 18.3 kDa

**Gene Summary:** Required during spermatogenesis and placenta development, participating in the repression

of retrotransposable elements and prevent their mobilization. Collaborates with the Piwiinteracting RNA (piRNA) pathway, which mediates the repression of transposable elements during meiosis by forming complexes composed of piRNAs and Piwi proteins. Interacts with

Piwi proteins and directly binds piRNAs, a class of 24 to 30 nucleotide RNAs that are

generated by a Dicer-independent mechanism and are primarily derived from transposons and other repeated sequence elements. Also during spermatogenesis, promotes, with UBR2,

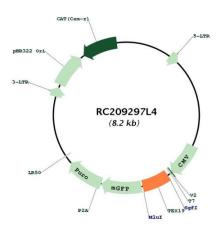

SPO11-dependent recombination foci to accumulate and drive robust homologous

chromosome synapsis (By similarity). Interacts with LINE-1 retrotransposon encoded LIRE1, stimulates LIRE1 polyubiquitination, mediated by UBR2, and degradation, inhibiting LINE-1

retranstoposon mobilization (PubMed:28806172).[UniProtKB/Swiss-Prot Function]
