SLC27A4 (NM_005094) Human Tagged Lenti ORF Clone – RC209557L4	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 005094.2</u>
RefSeq Size:	2991 bp
RefSeq ORF:	1932 bp

SLC27A4 (NM_005094) Human Tagged Lenti ORF Clone - RC209557L4

Gene Summary:This gene encodes a member of a family of fatty acid transport proteins, which are involved
in translocation of long-chain fatty acids cross the plasma membrane. This protein is
expressed at high levels on the apical side of mature enterocytes in the small intestine, and
appears to be the principal fatty acid transporter in enterocytes. Clinical studies suggest this
gene as a candidate gene for the insulin resistance syndrome. Mutations in this gene have
been associated with ichthyosis prematurity syndrome. [provided by RefSeq, Apr 2010]
