HAT1 (NM_001033085) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: HAT1 (NM_001033085) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: HAT1

Synonyms: histone acetyltransferase 1; KAT1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC209571).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001033085

ORF Size: 1002 bp

HAT1 (NM_001033085) Human Tagged Lenti ORF Clone - RC209571L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001033085.1</u>, <u>NP 001028257.1</u>

RefSeq Size: 1596 bp
RefSeq ORF: 1004 bp
Locus ID: 8520
Cytogenetics: 2q31.1

Protein Families: Druggable Genome

MW: 39.8 kDa

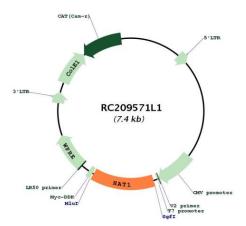

Gene Summary: The protein encoded by this gene is a type B histone acetyltransferase (HAT) that is involved

in the rapid acetylation of newly synthesized cytoplasmic histones, which are in turn imported

into the nucleus for de novo deposition onto nascent DNA chains. Histone acetylation, particularly of histone H4, plays an important role in replication-dependent chromatin assembly. Specifically, this HAT can acetylate soluble but not nucleosomal histone H4 at lysines 5 and 12, and to a lesser degree, histone H2A at lysine 5. Alternatively spliced transcript variants have been identified for this gene. [provided by RefSeq, Jun 2009]
