## Product datasheet for RC209660L2V

## SFRS3 (SRSF3) (NM\_003017) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	SFRS3 (SRSF3) (NM_003017) Human Tagged ORF Clone Lentiviral Particle
Symbol:	SFRS3
Synonyms:	SFRS3; SRp20
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
Tag:	mGFP
ACCN:	NM_003017
ORF Size:	492 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC209660).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 003017.3</u>
RefSeq Size:	3144 bp
RefSeq ORF:	495 bp
Locus ID:	6428
UniProt ID:	<u>P84103</u>
Cytogenetics:	6p21.31-p21.2
Domains:	RRM
Protein Families:	Stem cell - Pluripotency

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

<b>GRIGENE</b> SFRS3 (SRSF3) (NM_003017) Human Tagged ORF Clone Lentiviral Particle – RC209660L2V	
Protein Pathways:	Spliceosome
MW:	19.3 kDa
Gene Summary:	The protein encoded by this gene is a member of the serine/arginine (SR)-rich family of pre- mRNA splicing factors, which constitute part of the spliceosome. Each of these factors contains an RNA recognition motif (RRM) for binding RNA and an RS domain for binding other proteins. The RS domain is rich in serine and arginine residues and facilitates interaction between different SR splicing factors. In addition to being critical for mRNA splicing, the SR proteins have also been shown to be involved in mRNA export from the nucleus and in translation. Two transcript variants, one protein-coding and the other non-coding, have been found for this gene. [provided by RefSeq, Sep 2010]
