

Product datasheet for RC209775L4

RPS13 (NM_001017) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: RPS13 (NM_001017) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: RPS13
Synonyms: S13

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC209775).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001017

ORF Size: 453 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

RPS13 (NM_001017) Human Tagged Lenti ORF Clone - RC209775L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001017.2</u>

RefSeq Size: 529 bp
RefSeq ORF: 456 bp
Locus ID: 6207

 UniProt ID:
 P62277

 Cytogenetics:
 11p15.1

Domains: Ribosomal S15

Protein Pathways: Ribosome

MW: 17 kDa

Gene Summary: Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and

a large 60S subunit. Together these subunits are composed of 4 RNA species and

approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is

proteins. It is located in the cytoplasm. The protein has been shown to bind to the 5.8S rRNA

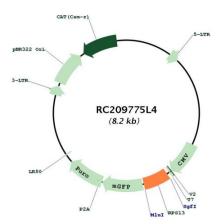

a component of the 40S subunit. The protein belongs to the S15P family of ribosomal

in rat. The gene product of the E. coli ortholog (ribosomal protein S15) functions at early steps in ribosome assembly. This gene is co-transcribed with two U14 small nucleolar RNA genes, which are located in its third and fifth introns. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the

genome. [provided by RefSeq, Jul 2008]
