

Product datasheet for RC209788

ADNP (NM_015339) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ADNP (NM_015339) Human Tagged ORF Clone

Tag: Myc-DDK

Symbol: ADNP

Synonyms: ADNP1; HVDAS; MRD28

Mammalian Cell Neomycin

Selection:

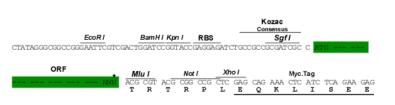

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Chromatograms: https://cdn.origene.com/chromatograms/mg5745 g05.zip

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

			EcoR V					Flag.Tag							F	me l	Fse I
																	ACGGCCGGCC
D L	A	A	N	D	I	L	D	Y	K	D	D	D	D	K	v	Stop	

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_015339

ORF Size: 3306 bp

OTI Disclaimer:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 015339.5</u>

 RefSeq Size:
 6158 bp

 RefSeq ORF:
 3309 bp

 Locus ID:
 23394

 UniProt ID:
 Q9H2P0

 Cytogenetics:
 20q13.13

Domains: homeobox, zf-C2H2

Protein Families: Transcription Factors

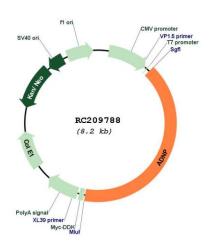

MW: 123.4 kDa

Gene Summary:

Vasoactive intestinal peptide is a neuroprotective factor that has a stimulatory effect on the growth of some tumor cells and an inhibitory effect on others. This gene encodes a protein that is upregulated by vasoactive intestinal peptide and may be involved in its stimulatory effect on certain tumor cells. The encoded protein contains one homeobox and nine zinc finger domains, suggesting that it functions as a transcription factor. This gene is also upregulated in normal proliferative tissues. Finally, the encoded protein may increase the viability of certain cell types through modulation of p53 activity. Alternatively spliced transcript variants encoding the same protein have been described. [provided by RefSeq, Jul 2008]
