

# Product datasheet for RC209830L3

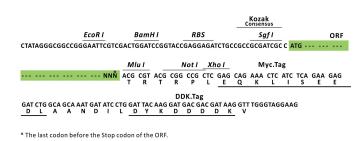

# LOXL1 (NM\_005576) Human Tagged Lenti ORF Clone

## **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	LOXL1 (NM_005576) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	LOXL1
Synonyms:	LOL; LOXL
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC209830).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgfi ORF Miui
	GCG ATC GC ATG // NNN ACG CGT

ACCN: ORF Size: NM\_005576 1722 bp

	0XL1 (NM_005576) Human Tagged Lenti ORF Clone – RC209830L3
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Meth	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 005576.2</u>
RefSeq Size:	2361 bp
RefSeq ORF:	1725 bp
Locus ID:	4016
UniProt ID:	<u>Q08397</u>
Cytogenetics:	15q24.1
Domains:	Lysyl_oxidase
Protein Families:	Secreted Protein
MW:	63.17 kDa

#### Source Content and Content and

# Gene Summary:This gene encodes a member of the lysyl oxidase family of proteins. The prototypic member<br/>of the family is essential to the biogenesis of connective tissue, encoding an extracellular<br/>copper-dependent amine oxidase that catalyzes the first step in the formation of crosslinks in<br/>collagen and elastin. The encoded preproprotein is proteolytically processed to generate the<br/>mature enzyme. A highly conserved amino acid sequence at the C-terminus end appears to<br/>be sufficient for amine oxidase activity, suggesting that each family member may retain this<br/>function. The N-terminus is poorly conserved and may impart additional roles in<br/>developmental regulation, senescence, tumor suppression, cell growth control, and<br/>chemotaxis to each member of the family. Mutations in this gene are associated with<br/>exfoliation syndrome. [provided by RefSeq, Jan 2016]
