

# Product datasheet for RC210065L2

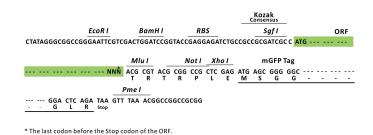

# STAT6 (NM\_003153) Human Tagged Lenti ORF Clone

# **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	STAT6 (NM_003153) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	STAT6
Synonyms:	D12S1644; IL-4-STAT; STAT6B; STAT6C
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC210065).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	Cloning sites used for ORF Shuttling:
	GCG ATC GC ATG // NNN ACG CGT

ACCN: ORF Size: NM\_003153 2541 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

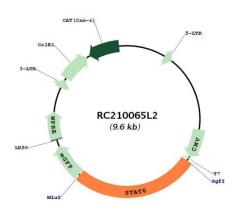

STAT6 (NM_003153) Human Tagged Lenti ORF Clone – RC210065L2	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 003153.3</u>
RefSeq Size:	4031 bp
RefSeq ORF:	2544 bp
Locus ID:	6778
UniProt ID:	<u>P42226</u>
Cytogenetics:	12q13.3
Domains:	SH2, STAT
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS, Stem cell relevant signaling - DSL/Notch pathway, Stem cell relevant signaling - JAK/STAT signaling pathway, Transcription Factors
Protein Pathways:	Jak-STAT signaling pathway
MW:	94.2 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

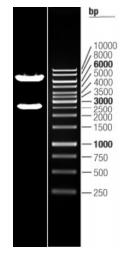

### **GRIGENE** STAT6 (NM\_003153) Human Tagged Lenti ORF Clone – RC210065L2

Gene Summary:The protein encoded by this gene is a member of the STAT family of transcription factors. In<br/>response to cytokines and growth factors, STAT family members are phosphorylated by the<br/>receptor associated kinases, and then form homo- or heterodimers that translocate to the<br/>cell nucleus where they act as transcription activators. This protein plays a central role in<br/>exerting IL4 mediated biological responses. It is found to induce the expression of<br/>BCL2L1/BCL-X(L), which is responsible for the anti-apoptotic activity of IL4. Knockout studies<br/>in mice suggested the roles of this gene in differentiation of T helper 2 (Th2) cells, expression<br/>of cell surface markers, and class switch of immunoglobulins. Alternative splicing results in<br/>multiple transcript variants.[provided by RefSeq, May 2010]
