### Caspase 14 (CASP14) (NM\_012114) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type: Expression Plasmids** 

**Product Name:** Caspase 14 (CASP14) (NM\_012114) Human Tagged Lenti ORF Clone

mGFP Tag:

Symbol: Caspase 14

ARCI12 Synonyms: **Mammalian Cell** 

Selection:

Vector: pLenti-C-mGFP (PS100071)

None

E. coli Selection: Chloramphenicol (34 ug/mL)

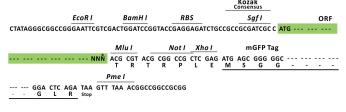

The ORF insert of this clone is exactly the same as(RC210146). **ORF Nucleotide** 

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

ACCN: NM\_012114

**ORF Size:** 726 bp

#### Caspase 14 (CASP14) (NM\_012114) Human Tagged Lenti ORF Clone - RC210146L2

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 012114.1</u>

 RefSeq Size:
 777 bp

 RefSeq ORF:
 729 bp

 Locus ID:
 23581

 UniProt ID:
 P31944

 Cytogenetics:
 19p13.12

**Protein Families:** Druggable Genome

**MW:** 27.5 kDa

**Gene Summary:** This gene encodes a member of the cysteine-aspartic acid protease (caspase) family.

Sequential activation of caspases plays a central role in the execution-phase of cell apoptosis. Caspases exist as inactive proenzymes which undergo proteolytic processing at conserved aspartic residues to produce two subunits, large and small, that dimerize to form the active enzyme. This caspase has been shown to be processed and activated by caspase 8 and caspase 10 in vitro, and by anti-Fas agonist antibody or TNF-related apoptosis inducing ligand

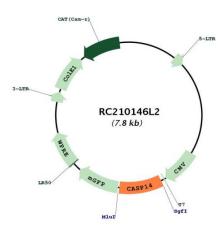

in vivo. The expression and processing of this caspase may be involved in keratinocyte

terminal differentiation, which is important for the formation of the skin barrier. [provided by

RefSeq, Jul 2008]
