Azurocidin (AZU1) (NM_001700) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Azurocidin (AZU1) (NM 001700) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Azurocidin

Synonyms: AZAMP; AZU; CAP37; HBP; hHBP; HUMAZUR; NAZC

Mammalian Cell

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Puromycin

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC210151).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001700

ORF Size: 753 bp

Azurocidin (AZU1) (NM_001700) Human Tagged Lenti ORF Clone - RC210151L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001700.3</u>

 RefSeq Size:
 912 bp

 RefSeq ORF:
 756 bp

 Locus ID:
 566

 UniProt ID:
 P20160

Cytogenetics: 19p13.3

Domains: Tryp SPc

Protein Families: Druggable Genome, Protease

MW: 26.89 kDa

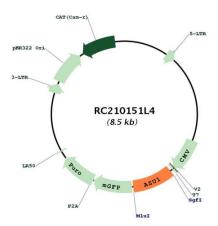

Gene Summary: Azurophil granules, specialized lysosomes of the neutrophil, contain at least 10 proteins

implicated in the killing of microorganisms. This gene encodes a preproprotein that is proteolytically processed to generate a mature azurophil granule antibiotic protein, with monocyte chemotactic and antimicrobial activity. It is also an important multifunctional inflammatory mediator. This encoded protein is a member of the serine protease gene family but it is not a serine proteinase, because the active site serine and histidine residues are replaced. The genes encoding this protein, neutrophil elastase 2, and proteinase 3 are in a cluster located at chromosome 19pter. All 3 genes are expressed coordinately and their protein products are packaged together into azurophil granules during neutrophil

differentiation. [provided by RefSeq, Nov 2015]
