GJD2 (NM_020660) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: GID2 (NM 020660) Human Tagged ORF Clone Lentiviral Particle

Symbol: GJD2

Synonyms: CX36; GJA9

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_020660

ORF Size: 963 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC210158).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 020660.1

 RefSeq Size:
 966 bp

 RefSeq ORF:
 966 bp

 Locus ID:
 57369

 UniProt ID:
 Q9UKL4

 Cytogenetics:
 15q14

Protein Families: Ion Channels: Other, Transmembrane

Protein Pathways: Gap junction

MW: 35.9 kDa

Gene Summary: This gene encodes a member of the connexin protein family. Connexins are gap junction

proteins which are arranged in groups of 6 around a central pore to form a connexon, a component of the gap junction intercellular channel. The channels formed by this protein allow cationic molecule exchange between human beta cells and may function in the

regulation of insulin secretion. [provided by RefSeq, Oct 2012]
