

Product datasheet for RC210362L2

GRPR (NM_005314) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GRPR (NM_005314) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: GRPR

Synonyms: BB2; BB2R; BRS2

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

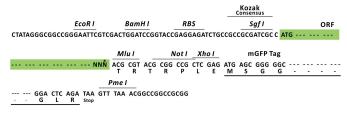

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC210362).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_005314

ORF Size: 1152 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

GRPR (NM_005314) Human Tagged Lenti ORF Clone - RC210362L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 005314.2</u>

 RefSeq Size:
 2681 bp

 RefSeq ORF:
 1155 bp

 Locus ID:
 2925

 UniProt ID:
 P30550

Cytogenetics: Xp22.2

Protein Families: Druggable Genome, GPCR, Transmembrane

Protein Pathways: Calcium signaling pathway, Neuroactive ligand-receptor interaction

MW: 43.2 kDa

Gene Summary: Gastrin-releasing peptide (GRP) regulates numerous functions of the gastrointestinal and

central nervous systems, including release of gastrointestinal hormones, smooth muscle cell contraction, and epithelial cell proliferation and is a potent mitogen for neoplastic tissues. The effects of GRP are mediated through the gastrin-releasing peptide receptor. This receptor

is a glycosylated, 7-transmembrane G-protein coupled receptor that activates the

phospholipase C signaling pathway. The receptor is aberrantly expressed in numerous

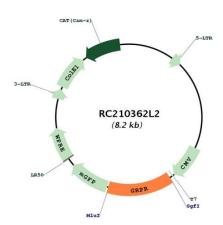

cancers such as those of the lung, colon, and prostate. An individual with autism and multiple

exostoses was found to have a balanced translocation between chromosome 8 and a chromosome X breakpoint located within the gastrin-releasing peptide receptor gene.
