## Myostatin Propeptide (MSTN) (NM 005259) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** Myostatin Propeptide (MSTN) (NM\_005259) Human Tagged ORF Clone Lentiviral Particle

Symbol: Myostatin Propeptide

Synonyms: GDF8; MSLHP

Mammalian Cell Pur

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_005259 **ORF Size:** 1125 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC210368).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 005259.1

 RefSeq Size:
 2823 bp

 RefSeq ORF:
 1128 bp

 Locus ID:
 2660

 UniProt ID:
 014793

Cytogenetics: 2q32.2

**Protein Families:** Druggable Genome, Secreted Protein

MW: 42.8 kDa

# Myostatin Propeptide (MSTN) (NM\_005259) Human Tagged ORF Clone Lentiviral Particle – RC210368L4V

#### **Gene Summary:**

This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is proteolytically processed to generate each subunit of the disulfide-linked homodimer. This protein negatively regulates skeletal muscle cell proliferation and differentiation. Mutations in this gene are associated with increased skeletal muscle mass in humans and other mammals. [provided by RefSeq, Jul 2016]
