OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## MADH7 (SMAD7) (NM\_005904) Human Tagged ORF Clone Lentiviral Particle - RC210400L3V

**Protein Pathways:** TGF-beta signaling pathway

MW: 46.2 kDa

**Gene Summary:** The protein encoded by this gene is a nuclear protein that binds the E3 ubiquitin ligase

SMURF2. Upon binding, this complex translocates to the cytoplasm, where it interacts with TGF-beta receptor type-1 (TGFBR1), leading to the degradation of both the encoded protein and TGFBR1. Expression of this gene is induced by TGFBR1. Variations in this gene are a cause of susceptibility to colorectal cancer type 3 (CRCS3). Several transcript variants encoding

different isoforms have been found for this gene. [provided by RefSeq, Jun 2010]
