Steroid sulfatase (STS) (NM 000351) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Steroid sulfatase (STS) (NM 000351) Human Tagged ORF Clone Lentiviral Particle

Symbol: Steroid sulfatase

ARSC; ARSC1; ASC; ES; SSDD; XLI Synonyms:

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK NM 000351 ACCN: **ORF Size:** 1749 bp

ORF Nucleotide

OTI Disclaimer:

Sequence:

The ORF insert of this clone is exactly the same as(RC210431).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

variants is recommended prior to use. More info

RefSeq: NM 000351.3

RefSeq Size: 6377 bp RefSeq ORF: 1737 bp Locus ID: 412

UniProt ID: P08842 Cytogenetics: Xp22.31 **Domains:** Sulfatase

Protein Families: Druggable Genome, Transmembrane

Steroid sulfatase (STS) (NM_000351) Human Tagged ORF Clone Lentiviral Particle - RC210431L3V

Protein Pathways: Androgen and estrogen metabolism

MW: 65.5 kDa

Gene Summary: This gene encodes a multi-pass membrane protein that is localized to the endoplasmic

reticulum. It belongs to the sulfatase family and hydrolyzes several 3-beta-hydroxysteroid sulfates, which serve as metabolic precursors for estrogens, androgens, and cholesterol. Mutations in this gene are associated with X-linked ichthyosis (XLI). Alternatively spliced transcript variants resulting from the use of different promoters have been described for this

gene (PMID:17601726). [provided by RefSeq, Mar 2016]
