## RAD51C (NM 058216) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** RAD51C (NM\_058216) Human Tagged ORF Clone Lentiviral Particle

Symbol:

BROVCA3; FANCO; R51H3; RAD51L2 Synonyms:

**Mammalian Cell** 

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

mGFP Tag:

NM 058216 ACCN: **ORF Size:** 1128 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC210462).

OTI Disclaimer:

Sequence:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

This clone was engineered to express the complete ORF with an expression tag. Expression **OTI Annotation:** 

varies depending on the nature of the gene.

RefSeq: NM 058216.1

RefSeq Size: 1337 bp RefSeq ORF: 1131 bp

## RAD51C (NM\_058216) Human Tagged ORF Clone Lentiviral Particle - RC210462L4V

**Locus ID:** 5889

 UniProt ID:
 O43502

 Cytogenetics:
 17q22

**Protein Families:** Druggable Genome

**Protein Pathways:** Homologous recombination

**MW:** 42.2 kDa

**Gene Summary:** This gene is a member of the RAD51 family. RAD51 family members are highly similar to

bacterial RecA and Saccharomyces cerevisiae Rad51 and are known to be involved in the homologous recombination and repair of DNA. This protein can interact with other RAD51 paralogs and is reported to be important for Holliday junction resolution. Mutations in this gene are associated with Fanconi anemia-like syndrome. This gene is one of four localized to a region of chromosome 17q23 where amplification occurs frequently in breast tumors. Overexpression of the four genes during amplification has been observed and suggests a possible role in tumor progression. Alternative splicing results in multiple transcript variants.
