## Product datasheet for RC210471L1V

## Fibrinogen beta chain (FGB) (NM\_005141) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Fibrinogen beta chain (FGB) (NM_005141) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Fibrinogen beta chain
Synonyms:	HEL-S-78p
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
Tag:	Myc-DDK
ACCN:	NM_005141
ORF Size:	1473 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC210471).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 005141.2</u>
RefSeq Size:	3628 bp
RefSeq ORF:	1476 bp
Locus ID:	2244
UniProt ID:	<u>P02675</u>
Cytogenetics:	4q31.3
Domains:	FBG
Protein Families:	Druggable Genome, Secreted Protein

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Fibrinogen beta chain (FGB) (NM_005141) Human Tagged ORF Clone Lentivira RC210471L1V	Particle –
Protein Pathwa	Complement and coagulation cascades	
MW:	55.9 kDa	
Gene Summary	The protein encoded by this gene is the beta component of fibrinogen, a glycoprotein comprised of three pairs of nonidentical polypeptide chains injury, fibrinogen is cleaved by thrombin to form fibrin which is the most component of blood clots. In addition, various cleavage products of fibrin regulate cell adhesion and spreading, display vasoconstrictor and chemo are mitogens for several cell types. Fibrinogen serves key roles in hemost antimicrobial host defense. Mutations in this gene lead to several disorder afibrinogenemia, dysfibrinogenemia, hypodysfibrinogenemia and throma [provided by RefSeq, Aug 2020]	. Following vascular abundant logen and fibrin tactic activities, and casis and ers, including
