Product datasheet for RC210578

Cathepsin B (CTSB) (NM_147783) Human Tagged ORF Clone

Product data:

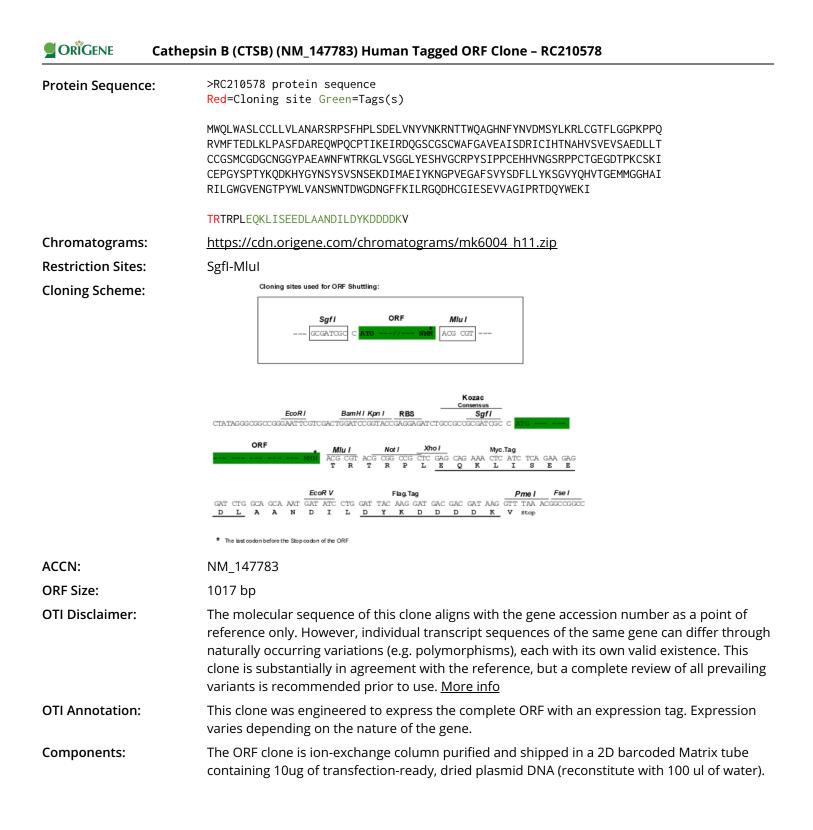

| Product Type: | Expression Plasmids |
|------------------------------|---|
| Product Name: | Cathepsin B (CTSB) (NM_147783) Human Tagged ORF Clone |
| Tag: | Myc-DDK |
| Symbol: | Cathepsin B |
| Synonyms: | APPS; CPSB; RECEUP |
| Mammalian Cell Selection: | Neomycin |
| Vector: | pCMV6-Entry (PS100001) |
| E. coli Selection: | Kanamycin (25 ug/mL) |
| ORF Nucleotide Sequence: | <pre>>RC210578 ORF sequence Red=Cloning site Blue=ORF Green=Tags(s)</pre> |

Cathepsin B (CTSB) (NM_147783) Human Tagged ORF Clone – RC210578

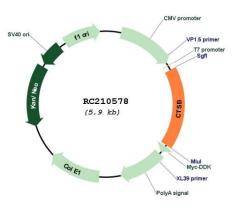

| Reconstitution Method: | Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. |
|------------------------|---|
| RefSeq: | <u>NM 147783.4</u> |
| RefSeq Size: | 3857 bp |
| RefSeq ORF: | 1020 bp |
| Locus ID: | 1508 |
| UniProt ID: | <u>P07858</u> |
| Cytogenetics: | 8p23.1 |
| Protein Families: | Druggable Genome, Protease |
| Protein Pathways: | Antigen processing and presentation, Lysosome |
| MW: | 37.8 kDa |
| Gene Summary: | This gene encodes a member of the C1 family of peptidases. Alternative splicing of this gene results in multiple transcript variants. At least one of these variants encodes a preproprotein that is proteolytically processed to generate multiple protein products. These products include the cathepsin B light and heavy chains, which can dimerize to form the double chain form of the enzyme. This enzyme is a lysosomal cysteine protease with both endopeptidase and exopeptidase activity that may play a role in protein turnover. It is also known as amyloid precursor protein secretase and is involved in the proteolytic processing of amyloid precursor protein (APP). Incomplete proteolytic processing of APP has been suggested to be a causative factor in Alzheimer's disease, the most common cause of dementia. Overexpression of the encoded protein has been associated with esophageal adenocarcinoma and other tumors. Both Cathepsin B and Cathepsin L are involved in the cleavage of the spike protein from the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) upon its entry to the human host cell. Multiple pseudogenes of this gene have been identified. [provided by |
