Strumpellin (WASHC5) (NM_014846) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Strumpellin (WASHC5) (NM_014846) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Synonyms: KIAA0196; RTSC; RTSC1; SPG8

Mammalian Cell Puromycin

Selection:

Symbol:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Strumpellin

E. coli Selection: Chloramphenicol (34 ug/mL)

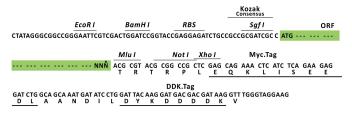

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC210620).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_014846

ORF Size: 3477 bp

Strumpellin (WASHC5) (NM_014846) Human Tagged Lenti ORF Clone - RC210620L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 014846.3</u>

RefSeq Size: 4173 bp RefSeq ORF: 3480 bp Locus ID: 9897

UniProt ID: Q12768
Cytogenetics: 8q24.13

MW: 134.1 kDa

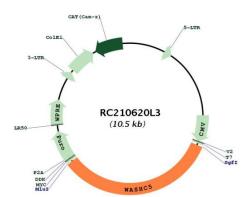

Gene Summary: This gene encodes a 134 kDa protein named strumpellin that is predicted to have multiple

transmembrane domains and a spectrin-repeat-containing domain. This ubiquitously expressed gene has its highest expression in skeletal muscle. The protein is named for Strumpell disease; a form of hereditary spastic paraplegia (HSP). Spastic paraplegias are a diverse group of disorders in which the autosomal dominant forms are characterized by progressive, lower extremity spasticity caused by axonal degeneration in the terminal portions of the longest descending and ascending corticospinal tracts. More than 30 loci (SPG1-33) have been implicated in hereditary spastic paraplegia diseases. [provided by

RefSeq, Aug 2009]
