Gene Summary:May participate in mRNA transport in the cytoplasm (By similarity). Critical component of the
oxidative stress-induced survival signaling. Activates src family kinases and acts as a
scaffolding protein enabling src family kinases to phosphorylate and activate PI3-kinase.
Binds RNA and promotes the secretion of IGF-II. May play a pivotal role in the progression of
scirrhous-type gastric cancer by supporting cancer cell survival in environments with various
oxidative stresses.[UniProtKB/Swiss-Prot Function]
