Gene Summary:Chemorepulsive axon guidance protein required for the development of spinal cord and
forebrain commissures. Acts as a chemorepulsive guidance protein for commissural axons
during development. Able to inhibit or repel neurite outgrowth from dorsal spinal cord.
Inhibits the stabilization of cytosolic beta-catenin (CTNNB1) via its interaction with LRP6,
thereby acting as an antagonist of Wnt signaling pathway.[UniProtKB/Swiss-Prot Function]
