# Product datasheet for RC210714L2V

## CRSP7 (MED26) (NM\_004831) Human Tagged ORF Clone Lentiviral Particle

### **Product data:**

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | CRSP7 (MED26) (NM_004831) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                      | CRSP7   |
| Synonyms:                    | CRSP7; CRSP70   |
| Mammalian Cell<br>Selection: | None  |
| Vector:                      | pLenti-C-mGFP (PS100071)  |
| Tag:                         | mGFP  |
| ACCN:                        | NM_004831   |
| ORF Size:                    | 1800 bp   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC210714).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 004831.3</u>  |
| RefSeq Size:                 | 3184 bp   |
| RefSeq ORF:                  | 1803 bp   |
| Locus ID:                    | 9441  |
| UniProt ID:                  | <u>095402</u>   |
| Cytogenetics:                | 19p13.11  |
| Protein Families:            | Druggable Genome  |
| MW:                          | 65.4 kDa  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### CRSP7 (MED26) (NM\_004831) Human Tagged ORF Clone Lentiviral Particle – RC210714L2V

Gene Summary:The activation of gene transcription is a multistep process that is triggered by factors that<br/>recognize transcriptional enhancer sites in DNA. These factors work with co-activators to<br/>direct transcriptional initiation by the RNA polymerase II apparatus. The protein encoded by<br/>this gene is a subunit of the CRSP (cofactor required for SP1 activation) complex, which, along<br/>with TFIID, is required for efficient activation by SP1. This protein is also a component of<br/>other multisubunit complexes e.g. thyroid hormone receptor-(TR-) associated proteins which<br/>interact with TR and facilitate TR function on DNA templates in conjunction with initiation<br/>factors and cofactors. [provided by RefSeq, Jul 2008]
